If the coffee maker fails to brew, the manual suggests checking the water reservoir for sufficient water and ensuring it is properly seated. It also recommends inspecting the K-Cup pod placement and cleaning any blockages in the needle area. Resetting the machine by unplugging and plugging it back in may also resolve the issue.

Leaking or Overflowing

Leaks or overflow can result from improper assembly or overfilling the water reservoir. The manual advises confirming that all components are securely attached and that water levels do not exceed the maximum fill line. Cleaning the drip tray and checking for cracks or damage can also prevent leaks.
