- Teflon tape
- Bucket and towel (for any potential spills)

Step-by-Step Installation Guide

1. Prepare the area: Turn off the water supply and remove the old toilet if applicable. Ensure the floor is clean and dry.
2. Install the wax seal: Position the wax seal on the flange of the new toilet. This will create a watertight seal when the toilet is installed.
3. Position the toilet: Carefully lower the Leos Loo onto the wax seal, aligning the bolt holes with the flange. Press down firmly to ensure a good seal.
4. Secure the toilet: Fasten the nuts onto the bolts to secure the toilet in place. Be careful not to overtighten, as this can crack the porcelain.
5. Connect the water supply: Attach the water supply line to the fill valve of the toilet. Use Teflon tape on the threads to prevent leaks.

6. Turn on the water supply: Open the water supply valve and check for leaks. If you notice any, turn off the water and tighten connections as necessary.
