- **Roof Pieces:** Usually triangular or trapezoidal wooden pieces designed to form the roof of the cabin or structure.
- **Base Platform:** Some sets include a base to provide stability for the structure being built.
- **Accessories:** Additional elements like windows, doors, and chimney pieces that add detail and realism.

2. **Create the Base:** Lay out a rectangular or square base using four notched logs arranged in a square, interlocking at the corners.
3. **Build the Walls:** Continue stacking notched logs on top of the base, alternating directions with each layer to ensure stability.
4. **Install Openings:** Leave gaps for windows and doors as desired by adjusting the placement of logs.
5. **Construct the Roof:** Use the roof pieces to cap the structure, fitting them securely on top of the final log layer.
