Word Problems Involving Equations Equal to 8

Word problems present practical scenarios where math equations that equal 8 are applied to find solutions. These problems require translating real-life situations into mathematical expressions and solving the equations accordingly.

Simple Addition and Subtraction Word Problems

Many word problems involve finding the total or difference represented by 8. For example, if a person has 3 apples and picks 5 more, how many apples do they have in total? This translates to $3 + 5 = 8$.

Multiplication and Division Word Problems

Other word problems use multiplication or division to arrive at 8. For instance, if there are 4 baskets with an equal number of oranges totaling 8, how many oranges are in each basket? This leads to the equation $4 \times x = 8$, with the solution $x = 2$.

Examples of Word Problems Resulting in Equations Equal to 8

1. A box contains 8 pencils. If 3 pencils are taken out, how many pencils

remain? ($8 - 3 = 5$)

2. There are 2 rows of chairs with an equal number of chairs in each row totaling 8 chairs. How many chairs are in each row? ($2 \times x = 8$)
3. John has 16 candies and wants to share them equally with a friend. How many candies does each person get? ($16 \div 2 = 8$)

Advanced Mathematical Expressions Resulting in 8

Beyond basic and algebraic equations, advanced mathematical expressions can also equal 8. These expressions may involve exponents, roots, logarithms, and trigonometric functions that simplify to the number 8 under specific conditions.
