Understanding Conversion Therapy

Conversion therapy, also known as "reparative therapy," refers to a range of practices aimed at changing an individual's sexual orientation or gender identity. These practices have been widely discredited by major medical and psychological organizations due to their ineffectiveness and potential for harm.

Types of Conversion Therapy

Conversion therapy can take various forms, including:

- **Psychotherapy:** Attempts to alter sexual orientation through talk therapy.
- **Behavior Modification:** Techniques aimed at changing behaviors associated with homosexuality.
- **Religious Counseling:** Spiritual guidance that encourages individuals to reject their sexual orientation.

- **Aversion Therapy:** Employing unpleasant stimuli to discourage same-sex attraction.

Despite the varied methods, the common goal remains the same: to change sexual orientation, often rooted in a belief that being LGBTQ+ is pathological or sinful.
