Connecting the Water Supply

- Direct Water Line Models: If your ice maker connects directly to a water supply, follow these steps:

1. Turn off the water valve.
2. Use a water line kit (often included) to connect the ice maker to the water source.
3. Turn the water valve back on and check for leaks.

- Reservoir Models: For models with a manual fill reservoir:

1. Remove the ice bin.
2. Fill the reservoir with clean water to the indicated fill line.
