- Use a safety harness: If you're working on a steep roof, always use a safety harness secured to a stable point.
- Ensure stable ladders: Use ladders that are in good condition and place them on stable ground.
- Work with a partner: Having someone nearby can help prevent accidents.

3. Inspect the Roof Deck

Before you start installing the shingles, inspect the roof deck for any damage, such as rot or mold. If repairs are necessary, make them before proceeding. Ensure the roof deck is clean, dry, and free of debris to guarantee proper adhesion.

Installation Process

Once you have prepared adequately, follow these detailed steps for installing Owens Corning Oakridge shingles.

1. Lay Down Underlayment

The first step in the installation process is to install the underlayment over the roof deck. This provides an additional layer of protection against moisture. Follow these steps:

- Start at the eaves: Unroll the underlayment horizontally, starting at the eaves and working your way up the roof.
- Overlap: Ensure that each row of underlayment overlaps the previous one by at least 4 inches.
- Secure: Use roofing nails or staples to secure the underlayment, placing them about 12 inches apart along the edges and 18 inches apart in the field.

2. Install Starter Strip Shingles

Starter strip shingles provide a secure base for the first row of Oakridge shingles. Here's how to install them:

- Cut to size: If necessary, cut the starter strip shingles to fit the width of the roof.
- Align: Begin at one edge of the roof and align the starter strip so that it overhangs the eaves by about 1/4 inch.
- Nail down: Use roofing nails to secure the starter strip, placing them approximately every 6 inches along the edges.

3. Install Owens Corning Oakridge Shingles

Now it's time to install the Owens Corning Oakridge shingles. This is the most critical part of the installation process:

1. Begin the first row: Start at one end of the roof. Place the first shingle directly on top of the starter strip, ensuring it is straight and aligned.
2. Nail the shingles: Use four roofing nails per shingle, placing them in the nailing strip located about 5 inches from the bottom edge. Ensure the nails are driven straight and not overdriven.
3. Offset the next row: For the second row, stagger the shingles by shifting them about 6 inches from the first row to create a more aesthetically pleasing look and improve water runoff.
4. Continue the process: Repeat these steps, continuing to install rows of shingles up to the peak of the roof.
5. Cut shingles as needed: Use a utility knife or shingle cutter to trim shingles at the edges or around obstacles like vents and chimneys.

4. Install Ridge Cap Shingles

Once you reach the peak of the roof, it's time to install the ridge cap shingles:

- Cut shingles: Cut the regular Owens Corning Oakridge shingles to create ridge caps, if necessary.
- Position the caps: Start at one end of the ridge and place the first cap shingle so it covers the top edge of the last row of shingles.
- Nail down: Use two nails on each side of the ridge cap, ensuring they are positioned below the top edge of the cap to prevent leaking.

5. Flashing and Ventilation

Proper flashing and ventilation are essential for the longevity of your roof. Here's how to install them:

- Install flashing: Use metal flashing around chimneys, vents, and other protrusions to prevent water from seeping into the roof.
- Ensure ventilation: Check that your roof has adequate ventilation. This can include ridge vents, soffit vents, and gable vents to prevent moisture buildup in the attic.

Post-Installation Steps

Once you have completed the installation of Owens Corning Oakridge shingles, there are several post-installation steps to follow.

1. Clean Up

Remove all debris, including old shingles, nails, and packaging materials. Ensure that the ground around the home is clear to prevent accidents.

After installation, take the time to inspect your work:

- Check for any loose shingles.
- Ensure that all nails are properly driven and not overdriven.
- Look for any potential leaks around flashing and vents.
