## What is an Oxo Food Mill?

An Oxo food mill is a kitchen gadget designed to puree and strain foods by using a hand-cranked mechanism. It consists of a bowl, a perforated disc, and a crank, making it an excellent tool for preparing various dishes. Unlike blenders or processors, the food mill retains the texture and flavor of the ingredients while allowing you to separate skins and seeds from purees.

## Components of the Oxo Food Mill

Understanding the components of your Oxo food mill will help you use it more effectively. Here are the main parts:

- **Bowl:** The main container that holds the food to be processed.
- **Perforated discs:** These come in various sizes (fine, medium, and coarse) and determine the texture of the puree. Each disc has different hole sizes to achieve your desired consistency.
- **Crank handle:** This is used to turn the mechanism that pushes the food through the perforated disc.
- **Base:** The food mill usually has a base that helps it sit securely on the countertop or over bowls and pots.
- **Scraper:** Some models come with a scraper that helps you push food towards the disc, ensuring nothing gets stuck.

## How to Use the Oxo Food Mill

Using the Oxo food mill is straightforward, but following these instructions will help you achieve the best results.

## Step-by-Step Instructions

1. **Prepare Your Ingredients:** Wash, peel, and chop your fruits or vegetables into smaller pieces for easier processing. For best results, steam or cook them until soft.
2. **Assemble the Food Mill:** Place the bowl on a stable surface, and attach the desired perforated disc according to the texture you want. Ensure it is securely fitted.
3. **Fill the Bowl:** Add your prepared ingredients into the bowl. Do not overfill; leave some space to allow for easy milling.
4. **Start Cranking:** Begin turning the crank handle in a clockwise direction. This will push the food through the disc and into the bowl below. Use the scraper if needed to keep the food moving.
5. **Check Consistency:** Stop occasionally to check the texture of the puree. For finer results, you may want to run it through the food mill a second time.
6. **Collect the Puree:** Once you've achieved the desired consistency, carefully remove the food mill from the bowl, and scrape the puree into another container.
7. **Clean Up:** Disassemble the food mill and rinse all components immediately after use to prevent food from drying and sticking.
