Understanding Parallel Structure

Parallel structure, also known as parallelism, refers to the grammatical and stylistic technique of using the same pattern of words or forms within a sentence to show that two or more ideas have the same

level of importance. It often involves the repetition of grammatical elements such as verbs, nouns, or phrases. Mastering parallel structure is crucial because it improves sentence clarity, rhythm, and readability. Writers use parallelism to create balance and symmetry, making their messages easier to follow and more persuasive.

Definition and Importance

Parallel structure requires that items in a series or list share the same grammatical form. For example, in the sentence "She likes reading, writing, and jogging," each item is a gerund, which maintains parallelism. Without parallel structure, sentences may become confusing or awkward, detracting from the intended meaning. Proper use of parallelism enhances coherence and emphasizes the relationship between ideas.

Identifying Parallelism in Sentences

To identify parallel structure, examine lists, comparisons, or paired ideas within sentences. Look for consistency in verb tense, form, and phrasing. Parallel elements can be joined by conjunctions such as "and," "or," or "but," or appear in bulleted or numbered lists. Recognizing parallelism is the first step toward applying it effectively in writing.

Common Errors in Parallel Structure

Misuse of parallel structure is a frequent grammatical error that can confuse readers and weaken sentence impact. Common mistakes involve mixing different parts of speech, inconsistent verb forms, or unequal sentence elements. Understanding these errors helps writers avoid them and maintain grammatical integrity.

Mixing Grammatical Forms

A typical error occurs when different grammatical forms are combined improperly in a series. For example, the sentence "He enjoys swimming, to bike, and running" mixes a gerund, an infinitive, and another gerund, which disrupts parallelism. Correcting this requires aligning all items in the list to the same form: "He enjoys swimming, biking, and running."

Inconsistent Verb Tenses

Another parallelism error arises when verb tenses are not consistent within a sentence. For instance, "She was singing, dances, and will play the piano" contains past, present, and future tenses irregularly. The sentence should be revised to maintain the same tense: "She was singing, dancing, and playing the piano."

Unequal Sentence Elements

Parallel structure also applies to paired ideas or comparisons. An error happens when sentence elements are unequal, such as "The manager said the report was accurate and that the results were verified." This can be improved by making both parts parallel: "The manager said the report was accurate and the results were verified."
