Understanding the PI Behavioral Assessment

The PI Behavioral Assessment is a scientifically validated tool designed to measure workplace behavioral drives and motivators. It helps employers predict how candidates and employees will perform in a given role by evaluating four primary behavioral factors. These factors include dominance, extraversion, patience, and formality. By analyzing these dimensions, the assessment provides a comprehensive profile of an individual's natural tendencies and behavioral patterns.

What is Measured in the Assessment?

The assessment focuses on underlying behavioral traits rather than skills or knowledge. It identifies how an individual approaches challenges, interacts with others, and adapts to work environments. The four key behavioral drives measured are:

- **Dominance:** The drive to exert influence and control.
- **Extraversion:** The desire for social interaction and communication.
- **Patience:** The preference for consistency and stability.
- **Formality:** The need for structure and adherence to rules.

These traits collectively help employers understand candidates' work styles and predict job fit.
