- Outputs: Motor.
- Logic:
 - When the start button is pressed, the motor starts.
 - When the stop button is pressed, the motor stops.

2. Traffic Light Control System

This program simulates a basic traffic light system with three lights (Red, Yellow, Green). It includes:

- Inputs: Timer.
- Outputs: Red light, Yellow light, Green light.
- Logic:
 - The system cycles through the lights in a specific sequence, with timers controlling the duration of each light.

3. Conveyor Belt Control Program

This program controls a conveyor belt with sensors to detect the presence of items. It includes:

- Inputs: Item sensor, Start button, Stop button.
- Outputs: Conveyor motor.
- Logic:
 - The conveyor starts when the start button is pressed.
 - The conveyor stops when the stop button is pressed or when an item is detected.
