Core Math Topics Covered in the Exam

Understanding the core topics tested in the RN basic math ability exam A Relias is essential for

effective preparation. The exam focuses on foundational math skills tailored to the nursing context, emphasizing accuracy and practical application.

Medication Dosage Calculations

Medication dosage calculation is a central component of the exam. Candidates must be able to calculate correct dosages based on physician orders, patient weight, and medication concentration. This includes understanding formulas such as:

- $\text{Dosage} = (\text{Desired Dose} / \text{Dose on Hand}) \times \text{Quantity}$
- Body weight-based calculations (mg/kg)
- Adjustments for pediatric and adult patients

Unit Conversions

Unit conversions are critical in nursing math, requiring knowledge of metric, apothecary, and household systems. The exam tests the ability to convert between units such as milligrams to grams, milliliters to liters, and teaspoons to milliliters. Mastery of conversion factors and dimensional analysis techniques is essential.

IV Flow Rate and Drip Calculations

IV flow rate calculation questions measure the ability to determine the correct infusion speed in drops per minute or milliliters per hour. Candidates must understand formulas and concepts such as:

- $\text{Flow rate (ml/hr)} = \text{Volume (ml)} \div \text{Time (hr)}$

- Drop factor and drops per minute calculations

Basic Arithmetic and Fractions

In addition to specialized nursing math, fundamental skills such as addition, subtraction, multiplication, division, and working with fractions and decimals are tested. These skills underpin more complex calculations and ensure numerical accuracy.
