Understanding the ROVSUN Mini Split System

The ROVSUN mini split system consists of two main components: an outdoor unit and one or more indoor units. This ductless setup allows for flexible installation and efficient climate control in various spaces.

Components of the ROVSUN Mini Split System

1. Outdoor Unit: This unit houses the compressor and condenser. It is designed to withstand outdoor conditions while providing optimal performance.
2. Indoor Unit: Each indoor unit is responsible for distributing conditioned air throughout the room. They come in various styles, including wall-mounted, ceiling-mounted, and floor-mounted options.
3. Remote Control: The system typically includes a remote for easy operation, allowing you to adjust temperature settings, fan speed, and more from anywhere in the room.
4. Refrigerant Lines: These lines connect the indoor and outdoor units, allowing for the transfer of refrigerant, which is crucial for the heating and cooling process.
5. Drain Line: This line directs condensation away from the indoor unit, preventing water buildup and potential damage.
