The most prevalent question types include multiple-choice questions, clinical case vignettes, and extended matching questions.

Multiple-Choice Questions (MCQs)

MCQs are the backbone of medical board exams, testing a broad range of knowledge areas. Each question presents a stem followed by several answer options, with only one correct choice. Clinical Case Vignettes

Clinical case vignettes simulate patient encounters by describing symptoms, history, and physical findings. Candidates must interpret this information to arrive at diagnoses, investigations, or management plans. These questions test integrative thinking and the ability to apply medical concepts in practical contexts.

Extended Matching Questions (EMQs)

EMQs consist of a list of possible answers followed by several related questions or scenarios. Candidates select the best answer for each scenario from the common list. This format emphasizes pattern recognition and the differentiation of similar clinical conditions.
